

Basement Systems Poland Sp. z o.o.

Software | Systems

Basement Sp. z o.o. started its operation in 2008 with building a system for a freight railway carrier. Its core activity is developing and implementing advanced software for businesses from the railway, banking and transport sector.

One of our products is DisPro – a system for mapping actual planning and dispatching processes. It allows optimum planning of the railway carrier's resources under different service scenarios, estimating the costs and running real-time operating performance checks.

The main modules of DisPro include:

- cost planning and pricing
- dispatching
- maintenance and rolling stock
- managerial accounting reports
- optimisation and automatic control.

Thanks to our long-term experience on the railway market, IT expertise and our reliable partner Hitachi Europe Ltd., we are able to complete multiple complex projects that generate savings and increase the satisfaction of workers and customers.
