

Nasycalnia Podkładów S.A.

Infrastructure

The railway sleeper treatment plant Nasycalnia Podkładów S.A. has operated since 1953. It occupies an area of 16 ha and is situated in Koźmin Wielkopolski, a picturesque town on Road No. 15 Jarocin-Krotoszyn near a railway line. The basic activity of the plant is treatment of timber by pressure-vacuum impregnation (Ruping method).

The company offers:

- manufacturing of wooden railway track structure: sleepers, switch-sleepers and other elements depending on orders
- manufacturing of pinewood telecommunications and power poles
- treatment of timber with type B and C impregnating oil and wood preservative salt KORASIT KS
- sale of all grades of coal (high heating value)
- manufacturing of building and general purpose timber.
